

The grid the lift and pressure figures are computed on

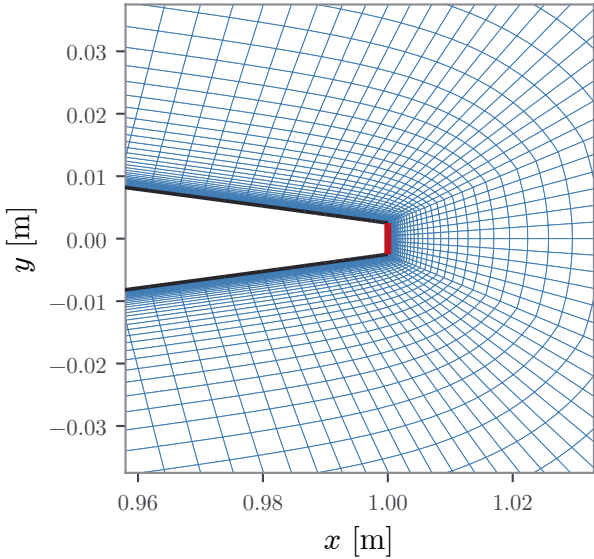

A. Around the wing (the whole grid reaches 26 m in every direction)

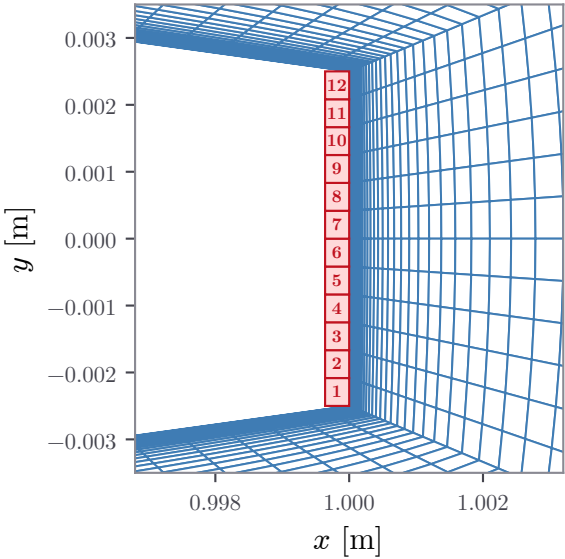

B. Leading edge

C. Trailing edge and the slot

D. Cells across the slot: 12

Sliced cell by cell: the wing, the leading edge, the trailing edge and the cells across the slot.

Computer time for the five calculations this mesh carries: we estimated 56.8 processor-minutes before running them and used 117.5 — 2.07 times our estimate. Building the mesh itself took under one processor-minute.
